

Sterile Drape

Pedigo disposable drapes are supplied by Polk Vocational Services (PVS) in North Carolina. The organization is ISO-13485 (medical device) certified and is a world class supplier of quality medical products.

PVS is a non-profit private corporation managed by an independent board of directors. 100% of the production operation profits are returned to the organization and used in conjunction with limited government funding to support the vocational services offering.

The purchase of the Pedigo disposable drape provides educational opportunities as well as vocational training and employment opportunities to adults with disadvantages and disabilities.

Pedigo strongly believes all our products should be produced in the United States and in the inherent quality, delivery and customer service advantages this strategy delivers. Pedigo is committed to and firmly supports the mission of PVS.

SPACE STATION DRAPE

The concept of the Space Station table is the ability to have one sterile surface over the top of another sterile surface. This is accomplished effectively with a perfect fitting drape. In the surgical environment, fit matters. That is why most surgery departments stock an expensive inventory of implants, wound closure products, instruments, gloves, drapes, gowns, etc.

FIT MATTERS

The exact fit of the Pedigo drape on the top shelf of the Space Station table along with the three Velcro tabs to secure the drape to the bottom of the top shelf allow for both surfaces to be fully utilized. There is no bulging or blousing of the drape over the lower tier of the table.

Velcro tab

STRENGTH MATTERS

The Space Station is used for the “big cases.” Large sterile containers of instruments are placed on both surfaces of the table. The Pedigo drape is a heavy duty drape with four layers of protection. There is a full adhesive bond between each layer. The Pedigo drape is manufactured in the United States and provides the highest level of protection on the market.

VISIBILITY MATTERS

The surface of the lower tier of the Space Station table measures 20 inches deep. The Pedigo drape has a clear plastic backing at the back of the lower tier. This plastic backing allows for light to pass through to increase visibility of important surgical instruments and supplies.
